

The db is created on run by the php code and the names of the table and db can be changed using the vars db\_name and accomodation\_table\_name .

Since the data could be fitted into an only table, which makes it easier to search and reduces operation time, both hotels and appartments shared data are marked as esential and the rest can be left null or default.

Name: accomodation\_db.

Tables:

accomodation:

Name	Type	NULL	Extra	Default	Desc
Id	int(6)	NO	auto increment primary		
type	varchar(15)	NO			can be hotel or apartament, its used to diferentiate
